

## Connect to VPN

1. Install global protect app  
(use the URL <https://95.177.214.126/global-protect/getsoftwarepage.esp> to download the global protect VPN client)
2. Install the attached certificate (follow the “Importing RootCA 1” document).
3. Open Global protect
4. Go to --> settings --> Connections
5. In Manage Portals add the following:  
95.177.214.126  
95.177.213.236  
95.177.214.202

6. Close the current settings popup
7. Click on Global protect icon and select the environment you want to connect to

8. Use you user name and password when asked for credentials to login and connect to the desired environment.
